Subject: Navajo Generating Station

I spoke with Rob Peterson, NGS, regarding concerns they raised to NNEPA regarding the Gold King Mine discharge. I directed him to the EPAOSC.org website and shared with him, the status of response efforts currently underway by EPA. He let me know that they will be analyzing monthly raw/treated samples for IOCs for the next year starting tomorrow and will share the results with us. With their lake intake fairly deep, he did not seem to be concerned about impacts from the spill based on the preliminary results of sampling in the upper reaches of the Animas River.
